

**KABA MAS ANNOUNCES MAJOR ATM CASH SECURITY SOFTWARE RELEASE
Cencon 4 Combines Dispatching and Management Efficiencies with Increased Security**

Lexington, KY – January 8, 2010 – Kaba Mas, the world’s foremost manufacturer of high-security electronic locking solutions, today announced the introduction of Cencon 4 software. This major release features an all new graphic user interface (GUI) designed to improve process flow and usability.

The Cencon Locking System has become the global choice for ATM cash vault security. Top Cash-in-Transit organizations, ATM maintenance providers as well financial institutions insist on using only the Cencon Locking System.

“Some 15 years ago, Cencon revolutionized the ATM servicing industry,” notes Stephen Pollack, marketing director for Kaba Mas. “Shared access among several companies was made possible by the use of software-generated one-time access combinations used in tandem with electronic Smart Keys. By storing user information and activity in the lock, software and key, confusion as to whom vault access was given was eliminated, thereby greatly reducing the temptation of opportunistic theft.”

Whether dispatching from one stand-alone PC or a network of terminals, using the latest version of Cencon 4 software along with the database management software Microsoft SQL Server, users are able to control hundreds or thousands of locks. “Technology and user requirements change rapidly,” says Steve Wolf, sales director for Kaba Mas. “In order to maintain our leadership position, we have adapted to these changing needs.”

Cencon 4 is compatible with a number of operating systems, including Windows Vista and the recently released Windows 7, both 32 and 64-bit varieties, and has a multitude of new and exciting features. Highlights range from mapping software and unlimited log-on roles with user-defined authorization, to the ability to rename remote user keys. The introduction of Cencon 4 also includes a new USB Key Box, which combines the functions of key reader and the unique code generating of the former PCI card.

About Kaba Mas

Located in Lexington, Kentucky, Kaba Mas is a subsidiary of the Kaba (SWX-KABN). The Kaba Group is headquartered in Rumlang, Switzerland with over 8,000 employees in nearly 60 countries.
